PROFESSIONAL SUMMARY

Informatics graduate of Universitas Atma Jaya Yogyakarta seeking a Junior Fullstack Developer role. Hands-on experience building web applications with React.js, TypeScript, Node.js/Express, REST APIs, and PostgreSQL. Curious and self-driven learner who can translate brief requirements into practical solutions, while validating technical decisions with the team. Adaptable to new technologies and actively engaging in technical discussions and applying critical thinking to solve complex problems.

TECHNICAL SKILLS

Frontend: React.js, JavaScript (ES6+), TypeScript, Vite, HTML5, CSS3, Tailwind CSS, Bootstrap, ShadCN

Backend: Laravel (PHP), Node.js, Express.js, REST APIs, JWT Authentication, Role-Based Access Control

Database: SQL (PostgreSQL, MySQL), Prisma ORM

Tools & DevOps: Git, Docker, Postman, Figma, Firebase

Blockchain: Ethereum (Sepolia Testnet), Hyperledger Fabric

WORK HISTORY

Hagios School of Life • Software Developer Intern

January 2026 • March 2026

- Engineered and deployed a full-stack Academic Information System (SIAKAD) for 220+ active users (37 teachers and 184+ students) using React.js, Vite, Laravel REST APIs, and MySQL.
- Collaborated with stakeholders and school staff to translate functional requirements into 5 core administrative modules (GPS Attendance, Tuition/SPP Payments, Digital Report Cards, Announcements, and Master Data) across web and mobile platforms in a 45-day sprint.
- Integrated frontend interfaces with REST APIs for real-time data fetching, rendering, and state management.
- Built a cross-platform Flutter mobile app enabling GPS-geofenced attendance with photo selfie validation for 37 teachers within a 30-meter radius.
- Collaborated using Agile-Iterative methodologies and Git feature-branch workflows to deliver incremental sprint goals.

PROJECTS

BookSpot – Venue Booking Platform (Personal Project) *In progress*

React.js, TypeScript, Vite, Node.js, Express.js, PostgreSQL, Prisma

- Built a Node.js/Express backend with PostgreSQL and Prisma, including user registration and login authentication.
- Built a React + TypeScript + Vite frontend with login/register pages and an authentication-based ProtectedRoute.
- Currently building venue, booking, payment (mock gateway), and dashboard features using vertical slices per sprint.

Academic Data Security Testing System • Final Project (Thesis)

React.js, Vite, Node.js, Express.js, PostgreSQL, Ethereum Sepolia, Hyperledger Fabric

- Built a fullstack web application: React.js + Vite frontend and Node.js/Express.js backend with PostgreSQL.
- Implemented REST APIs, JWT authentication, and role-based access control.
- Proactively researched and integrated Ethereum Sepolia and Hyperledger Fabric technologies to test academic data integrity, presenting verified benchmark results to academic advisors.

MSME and Local Potential Website, Sumber Hamlet • Community Service Project (KKN)

React.js, Bootstrap CSS, Laravel REST APIs

- Developed a responsive website showcasing local MSMEs (micro, small, and medium enterprises) and the hamlet's potential.
- Built CRUD features and an admin dashboard to manage MSME, product, potential, gallery, and report data.

EDUCATION

Universitas Atma Jaya Yogyakarta • S1 Informatika *September 2022 – August 2026*

IPK: 3.67/4.00
